Slependen, Norway

Air conveying system at Coop MEGA

A new air conveying system at the Coop MEGA store in Slependen, Norway has led to a better customer experience, less downtime and measurable savings.

Katrine Fugleberg shop manager trainee at Coop MEGA Slependen specifically points out the time they save with this new system; " We spend much less time in the deposit room, and the customers notice it". The air conveying system has also changed the store routine, freeing up employees from unnecessary tasks, which in turn contributes to better workflow.

This improvement has led to other financial benefits for the store: the daily volume of recycled objects has increased to approximately 30,000 without causing an increase in the workload. This has also led to a greater customer experience and throughput.

When asked if she would recommend the system to other stores, the response is a resounding yes;

"Absolutely! This is particularly favorable for larger stores with high volumes. If you want to make processes more efficient, this is a solution worth evaluating."
